# Innovation Management

*We provide innovation management support for public grant funded projects and private membership funded consortia.*

A key part of an innovation strategy is ability to provide public grant funding and/or private investment required for the development of an innovative technology, product or process and strategy to get to market. We have an innovation ecosystem to support innovation development.

Our technical experts support collaboration on novel technology concepts and preparation of competitive proposals for submission to European and UK grant funding calls, for research and development (R&D) projects.

Funded by  
the European Union

Innovate  
UK

We actively help with a project proposal preparation focusing on the impact and our reward is to be a consortium partner on the successful projects working on the innovation management related tasks including exploitation, dissemination and communication of the project results.

There is no fee for our support on proposal preparation. Only cost is your commitment. We will match your commitment with our commitment

We helped more than 15 projects getting public grants from EU and UK with more 150 partner organisations and more than 80 million EUR received in funding.

15+ Innovative Projects

€80M+ Grants Received

<p>Energy</p>		<p>Biomedicine</p>		<p>Aerospace</p>	
<p>Environmental</p>		<p>Circular Economy</p>		<p>Automotive</p>	
<p>Data Management</p>		<p>Characterisation</p>		<p>Construction</p>	
		<p>Additive Manufacturing</p>		<p>Sport</p>	

We provide innovation management services and community development support for private membership funded consortia.

An example of a private membership funded consortium is the Nano-Carbon Enhanced Materials (NCEM) consortium, launched in April 2012 in collaboration with the Centre for Business Innovation Ltd. The NCEM consortium has been running for 7 years and it included members from leading multi-national companies.

### NCEM-1, 2, 3, 4, 5, 6 & 7 MEMBERS

The private consortia provide an opportunity to engage with leading companies in the supply chain and also with leading world class experts in a commercialisation pathfinder programme. It also provides an opportunity to develop materials commercialisation strategy through an active technology watch programme with a unique insight into state-of-the art of technologies and key player strategies and also to secure IP and develop technologies through participations in collaborative R&D programmes and direct commercialisation partnerships.

The private membership funded consortia meetings are usually at historic setting of Cambridge colleges, one of its members' sites or hosted at a leading research institution around the world, often with guided tour of their facilities. Leading experts are invited to join and participate at the specific meetings related to their field of expertise.
